## Lab Exercise 11 – PHP and MYSQL
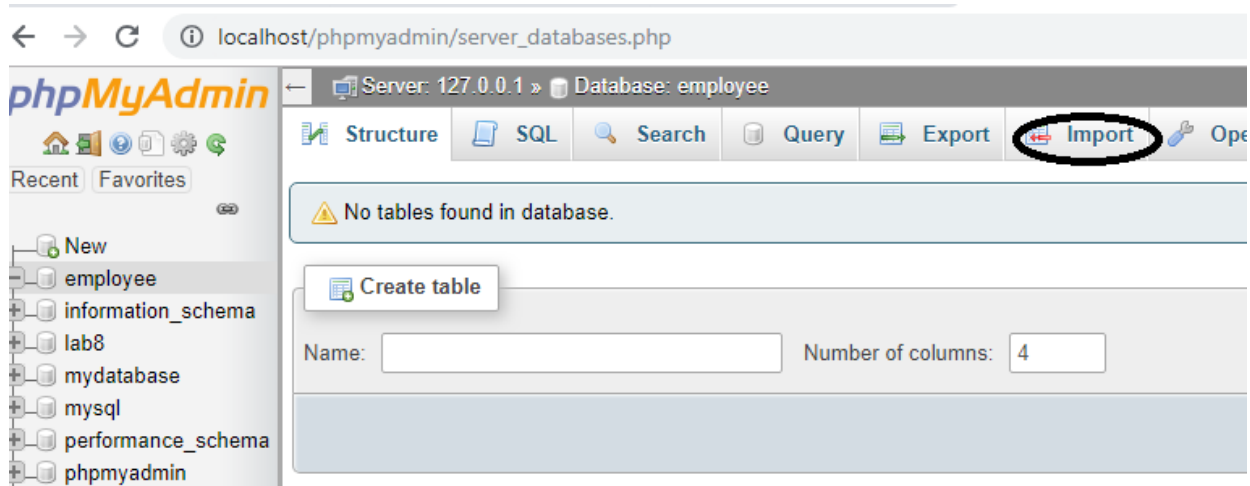

Employee Management System

Let's learn how we can create a simple employee management system with php and mysql.

1. Download the zip folder from course web and unzip it to htdocs folder.
2. Follow the steps as instructed below.

   a) Create database ,name "employee".

   b) Import "employee.sql" file in to your database.

Lab Exercise 11 – PHP and MYSQL

c) now check the project http://localhost/exam/

Lab Exercise 11 – PHP and MYSQL

d) Add data and understand how insert works. Click here will take you to a search page, analyze how the search function work.

To Retrieve Records

Enter Designation :   [Submit]

Name	Salary
abc	15000
abc	15000
Ajay Singh	15000

Click Here to go Back. Home

Exercise 01

a) Construct find.php to do search with name instead of designation. Display all the details (in the code it shows only name and salary).

b) Add delete link next to each record and implement delete function.
